THADOMAL SHAHANI TSEC ENGINEERING COLLEGE

A4 Completed 13/10/26

Assignment - 1

ASD & D

Name : Ishita Chelbaxani

ROLL NO : 34

Class : T1

Application Domain : Food delivery system

Agile requirements

The food delivery system allows customers to search restaurants, view menus, order food, make payments and track deliveries. Agile methodology is used to develop the system through small, iterative sprints

User story - 1 Registration

User Story :

As a customer, I want to register/login so that I can use the food delivery application

Acceptance criteria

1) User enters valid details
2) System validates the details
3) Account is created successfully.

THADOMAL SHAHANI TSEC ENGINEERING COLLEGE

User Story 2 - Restaurant Search
As a customer, I want to search for restaurants so that I can find a suitable restaurant.

Acceptance Criteria:-

1) User can search by restaurant name
2) Matching restaurants are displayed
3) User can select an available restaurant

User Story 3 - View Menu
As a customer, I want to view the restaurant menu so that I can select food items.

Acceptance Criteria:-

1) Food names and prices are displayed
2) Food availability is shown
3) User can select available food items

User Story - 4 Add to Cart
As a customer, I want to add food items to my cart so that I can place an order

Acceptance Criteria:-

1) User can add food items to the cart.
2) User can change the quantity
3) Total price is calculated correctly.

THADOMAL SHAHANI TSEC ENGINEERING COLLEGE

User Story 5 - Place order
As a customer, I want to place an order so that the selected food can be delivered to me.

Acceptance Criteria:-

1) User enters a valid delivery address.
2) Cart should contain at least one item
3) Final order amount is displayed.
4) Order ID is generated after placing the order.

User story 6 - Online payment
As a customer, I want to make an online payment so that I can complete my order.

Acceptance Criteria:-

1) User can select a payment method.
2) Payment amount matches order amount
3) Successful payment confirms order.
4) Failed payment displays an error message.

User Story 7 - Order Tracking
As a customer, I want to track my order

Acceptance Criteria
1) User can view the current order status.
2) Status is updated as the order progresses.
3) Status includes confirmed, Prepared, Picked Up and Delivered.

PRODUCT BACKLOG

A product backlog is a prioritised list of requirements that need to be developed in the system.

Priority	User story	Story points
1	Registration/Login	3
2	Restaurant search	5
3	View Menu	3
4	Add to cart	5
5	Place order	8
6	Online Payment	8
7	Order Tracking	5

Story points Total = 37

Story point estimation
The fibbonacci scale is used:-
1 2 3 5 8 13

eg] Registration requires less effort and is given 3 points, while Online payment is more complex and is given 8 points.

Planning poker can be used by the Agile team to estimate story points.

Sprint Planning
For mis project, each sprint is planned for 2 weeks.

Sprint 1
Goal → Develop basic customer & restaurant features

Selected stories

Registration / Login - 3 points
Restaurant search - 5 points
View Menu - 3 points
Add to cart - 5 points

Sprint 1 Tasks

1) Develop Registration & Login
2) Implement Restaurant Search
Create the restaurant Menu
Implement the shopping cart
Test the developed features

Sprint 2
Goal → Enable customers to place & pay for orders

Selected stories

Place order - 8 points
Online payment - 8 points

Total = 16 story points

THADOMAL SHAHANI TSEC ENGINEERING COLLEGE

Sprint 2 Tasks

1) Develop the checkout process
2) validate the delivery address
3) Implement online Payment
4) Generate the order ID
5) Test successful & failed payments

Release Planning
Decides which features will be completed & delivered in each sprint

Sprint 1 - 16 points

Registration - 3 points
Restaurant search - 5 points
view menu - 3 points
Add to cart - 5 points

Sprint 2 - 16 points

Place order - 8 points
online Payment - 8 points

Sprint 3 - 5 points

order Tracking - 5 points

Total = 37 story points

Agile Quality Assurance

Agile QA involves continuous testing during each sprint to ensure that the software works correctly.

QA Techniques

1) Unit Testing - Tests individual modules
2) Integration Testing - Checks whether modules work together
3) Regression Testing - Ensures new changes do not affect existing features
4) Acceptance Testing - Checks whether user stories meet their acceptance criteria.
5) Exploratory Testing - Finds unexpected errors through application exploration.

Definition of Done

A user story is completed when: -

1) Development is completed
2) Acceptance criteria are satisfied.
3) Testing is completed
4) No critical defects remain

Test cases

TC01- Registration
Test - Enter valid details
Result - Account is created

TC02 - Restaurant search
Test - Search a restaurant
Result - Matching restaurant is displayed

TC03 - View Menu
Test - Open a restaurant
Result - Menu is displayed.

TC04 - Add to cart
Test - Add a food item
Result - Item is added to cart

TC05 - Place order
Test - Place order with valid address
Result - Order ID is generated.

TC06 - Payment
Test - Make online payment
Result - Order is confirmed

TC07 - Order Tracking.
Test - Track an active order
Result - Current status is displayed.

CONCLUSION

Agile methodology helps develop the food delivery system incrementally through user stories and sprints. Sprint planning and story points help manage development, while continuous testing quality and reliability of the system.
